fine lines and reversing sun damage. These days, grease is the word.

The overwhelming fear of all things oily—a characteristic of our low-cal, fat-free society—is a relatively recent phenomenon. Oils,

Although dermatologists are far from replacing Retin-A with olive oil, treating oil-prone skin with essential oils (lemongrass, peppermint) can help decrease its oiliness. "Oil liquefies sebum and helps it flow out of the pores so you can wash it away," explains Manhattan spa owner Susan Crimell. Makeup artist Bobbi Brown developed her Extra Facial Oil not only to add luminosity to her dry skin but also as a spot treatment for the occasional blemish. "Dirt clogs pores, not oil," says Brown. "Drying out the skin makes the body produce more oil, which just aggravates the problem," adds model and Sundari skin-care cofounder Christy Turlington. And if Turlington, a fan of her company's Nighttime Nourishing Oil, is any example, it works.—NING CHAO

Wearing white suede boots calls for rain? Forget it. If sandpaper? Unthinkable ingrained, it's almost impossible to break them. Massaging sounds like skin suicide, but browse the cosmetic aisle and you'll see a subtle, significant change. Skin-care regimens are increasingly growing to include moisturizers, cleansers, and serums rich in evening primrose, camellia, flaxseed, and sweet almond oils that promise to do everything from healing blemishes to erasing
